*'Growing Communities'*

## Who we are

**Community Growing Solutions CIC** is a locally based horticulture social enterprise which brings together growing activities throughout Fife and Scotland. We specialise in assisting community groups who are engaged in community garden and growing spaces projects.

## What we do

**Community Growing Solutions**, through project management and development, training and education, planning and health awareness, provides organisations with solutions to the many growing space challenges that are currently being experienced throughout Scotland and the UK. Our vision is that allotments and green spaces should be more than just areas that are restricted to traditional growing and ought to become places where all members of the community; schools, clubs, individuals and organisations can engage and develop community activities, social inclusion and environmental development.

## Our Objectives

- Support the increasing number of community growing activities.
- Encourage and support all growing projects.
- Encourage individuals and groups to make use of training opportunities.
- Re-invest any surplus generated back into local community activities.

## The benefits of working with us

- Leading industry knowledge within the growing and horticulture sector throughout Scotland.
- Extensive network of contacts and lead industry involvement through partnership working.
- Dedicated, flexible team.
- Close working relationship with local authority, NHS and leading social charities to support food awareness.

## Other Services

Our sister company, **Lever Training Ltd**, provides training opportunities within the horticulture and landbased sector for which we run a range of courses that can lead to a recognised qualification, additional training experience or support employment.
