

Magnus Spence's herbarium in Stromness Museum, Orkney

Magnus Spence (1853-1919) assembled his herbarium collection in the late Nineteenth and very early Twentieth Centuries. The number of specimens in the herbarium is 918, comprising 556 species of vascular plants, seven algae and five bryophytes. The original total certainly included two further species of vascular plant, each represented by a single specimen. These were borrowed and not returned by Henry Halcro Johnston (see below), according to notes that he himself wrote on the herbarium sheet labels.

All except four specimens were collected in Orkney, the remainder in Shetland. All but a handful were collected by Spence himself.

Spence named some of the specimens himself, others with the assistance of Arthur Bennett (1843-1929), a well-known botanist of the time who lived in Surrey.

In 1923-4 Henry Halcro Johnston (1856-1939), another eminent Orkney botanist, reorganised the collection, re-labelling all the plants according to the nomenclature of the time. Mainly he followed Spence's and Bennett's identification of species, though in some cases he re-determined them and in others, of critical species, followed the re-determinations made by visiting experts in previous years. There are cases also where Bennett, or another expert, or Johnston, decided they could not put a species name to a specimen that had earlier be named by Spence or someone else: Johnston gave these a genus name only. Apart from the re-naming, it is not clear how much reorganising Johnston did: the herbarium sheet numbers are the same as Spence's, but it seems likely that the ordering by family and the numbering of species are Johnston's.

A herbarium catalogue was compiled in February and March 2012 by John Crossley, BSBI Vice-county Recorder for Orkney. The ordering of plant families and species is unchanged from that of Johnston. The catalogue is arranged as a table and comprises:

Column A. Species number

Column B. Herbarium sheet number

Column C. Family and species name, with authority, following Johnston (1923-4). A small number of specimens have been re-determined by JC, and in these cases the species name given by Johnston and its current synonym in the following column, has been stroked through and the new name given in Column H the 'comments' column.

Column D. Species name, with authority, up-dated to 'current synonymy' in 2012. Wherever possible, and in the great majority of cases, the synonymy for vascular plants follows 'Stace 2010' (Stace, Clive. A. 2010. New Flora of the British Isles (Third edition). CUP). Some variety names used by Johnston are not to be found in Stace, and in these cases they were taken from other recent publications, especially the Flora Europaea dataset at <http://www.rbge.org.uk> or, failing that, monographs on critical plant groups published by BSBI. In a very few cases no synonym could be found. The 1920s were a time of unprecedented splitting of the British flora.

Synonyms for algae were taken from Guiry, M.D. & Guiry, G.M. 2012. Algaebase. World-wide electronic publication, National University of Ireland, Galway. <http://www.algaebase.org>

Synonyms for bryophytes were taken from Smith, A.J.E. 2004. The Moss Flora of Britain and Ireland (Second edition). CUP., and Paton, Jean A. 1999. The Liverwort Flora of the British Isles. Harley Books (Colchester).

Column E. Common name (English)

Column F. Collectors' names

Column G. Page reference for the taxon in Flora Orcadensis, Magnus Spence's flora of Orkney, published in Kirkwall in 1914.

Column H. Comments. These include comments entered by Johnston on his herbarium sheet labels, where especially pertinent, mainly the names of expert determiners, and by John Crossley in 2012.

John Crossley, April 16 2012

Species number	Herbarium sheet reference	Species name (HHJ 1923-1924)	Species name (2012)	Common name	Collector	Flora Orcadensis page ref.	Comments. HHJ = Henry Halcro Johnston. MS - Magnus Spence.
