

Proposal: Outdoor Shelter/Classroom, Ardfern Playing Field

- Built of locally sourced larch with natural preservative treatment
- Turf-covered 'reciprocal'-structured roof with central light, deep eaves for shelter
- Mix of wooden and steel fixings, concrete pad foundations
- Built-in bench seating for 30 children/20 adults
- Options for additional seating, built-in lighting, partial walling

(example of construction type, unfinished)

This robust round pavilion structure would act as a shelter/play space during playtime, evenings and weekends, and an outdoor classroom as and when required. Construction would be offsite (3-4 weeks) with 3-4 weeks onsite to complete, and it could be expected to last 20-25 years with minimal maintenance.
